

ER34615M

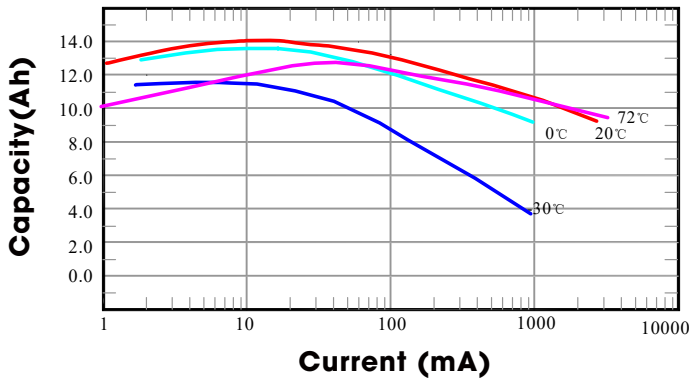

3.6V / 14.0Ah

Lithium Thionyl Chloride Battery

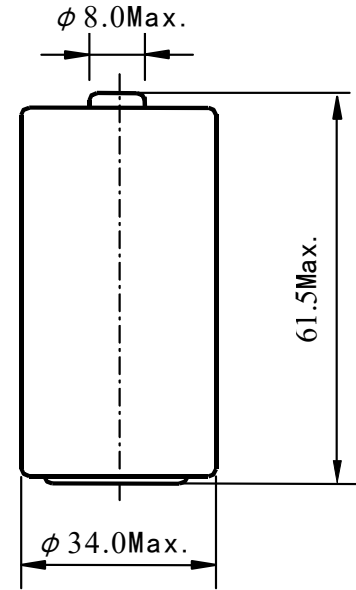

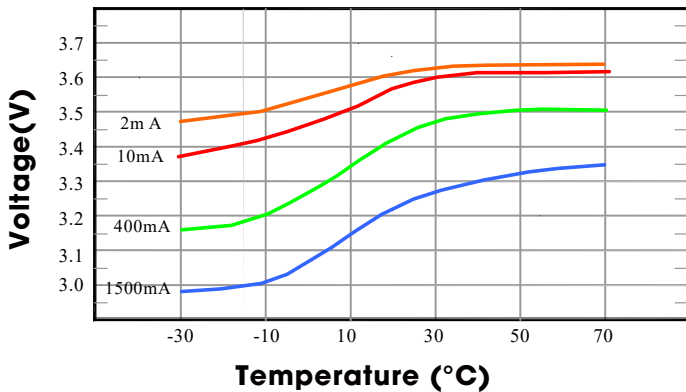

DISCHARGE CHARACTERISTICS AT 23±2°C

CAPACITY VS. CURRENT

VOLTAGE VS. TEMPERATURE

ELECTRICAL CHARACTERISTICS:

SPECIFICATION: (23 ± 2°C)

Nominal Capacity (10mA~2V): 14.0Ah

Rated Voltage: 3.6V

Max Constant Current of Discharge: 2000mA

Max Discharge Current (Pulse): 3000mA

Operating Temperature Range: -55°C~85°C

Weight (approx): 118g

S: STANDARD TERMINATION

Notes:

- Dimension:mm
- Special terminations can be made as requested.
- T: Solder tabs
- P: Axial pins

Important Notes:

- Do not short or charge the battery.
- Over-discharging, crushing, incinerating, and disassembling the battery are prohibited.
- Do not heat/use the battery beyond the permitted temperature range.

U.L. Component Recognition MH 45782
